Prehistoric mammals

Arsinoitherium

Arsinoitherium is an extinct genus mammal that were superficially rhinoceros-like herbivores that lived in northern Africa from 36 to 30 million years ago.

[Learn more about Arsinoitherium](#)

Elasmotherium

Elasmotherium, also known as the Giant Siberian Unicorn, is an extinct genus of rhinoceros endemic to Eurasia during the Late Pliocene through the Pleistocene.

[Learn more about Elasmotherium](#)

Glyptodon

Glyptodon was a large, armored mammal, a relative of armadillos that lived during the Pleistocene epoch.

[Learn more about Glyptodon](#)

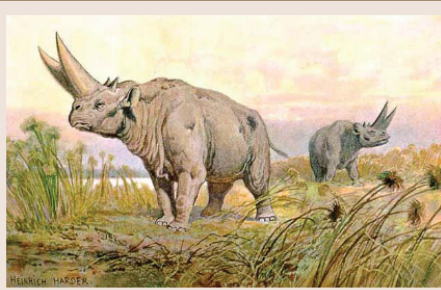

Megatherium

Megatherium was a genus of elephant-sized ground sloths endemic to South America that lived from the Early Pliocene to the Pleistocene.
